Voodoo

🎮 **GAME DEVELOPER TECHNICAL ASSIGNMENT** | CORE STUDIOS

⏰ DURATION: ±8 HOURS

OBJECTIVE

The purpose of this technical test is to evaluate your capabilities as a game developer in a live game. We will assess your code quality, the choice of architecture, and the effectiveness of your delivery. We will test your project on a mobile device.

ASSIGNMENT OVERVIEW

All 3 exercises within this test consist of creating a feature for **Draw.io**. Consider it to be a fully released game. Note that these features should function independently and it should be possible to **individually enable/disable** them.

The Unity project of Draw.io + additionally required assets can be **downloaded here**. You're free to include any additional asset you feel necessary. The project is using Unity 2022.3.54f1.

SUBMISSION GUIDELINES

- You have one week to complete the test. If you need more time, please let us know
- The test needs to contain:
  - The essential files needed to get the project up and running
  - An Android build (apk)
  - A short playthrough video record of what you've done
- Send us a .zip file or a link to download your test (WeTransfer or Google Drive)
- Your test has to be sent back to victor.mutuale@voodoo.io

We really appreciate your effort & time in completing this challenging technical test, and we look forward to reviewing your submission.

Good luck!

Voodoo

TEST

🎲**Feature 1 - Booster Game mode**

- Implement a second game mode that can be started from a button on the start menu.
  - This game mode has a separate progression from the main game, with an infinite number of levels
  - Create a level design system so that we can easily decide on a different booster setup for each level
- Implement 2 new boosters that should appear only in this game mode, in addition to the 3 boosters already present
  - One that should temporarily increase the player speed on collect
  - One that should fill a circle at a random position with the player color

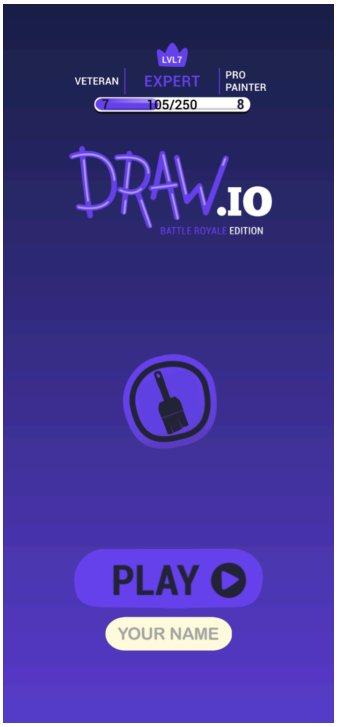
Approximate Duration - 3 hours
In this exercise, we are trying to assess your adaptability with the existing code base, your game feel, as well as your code structure. We'll particularly look at its extensibility and its stability.

Voodoo

🎲**Feature 2 - Skin Selection Screen**

- Implement a new Skin Selection Screen *(see mock-up 1)*
    - The screen should contain a scrollable list with 12 different skins (using 2 models in 6 different colours)
    - All skins (in the scrollable list and on top of the screen) should slowly rotate
    - Optionally, you can enhance the screen with for example additional animations and/or particle effects.
- Replace the existing skin selection feature (present in the main menu) with a button that opens the Skin Selection Screen *(see mock-up 2)*

Mock-up 1



Mock-up 2

Approximate Duration - 4 hours
In this exercise, we are trying to assess your understanding and use of the existing code base, how you save and load the user's preferences, and how you integrate the 3D visuals. We'll particularly look at the functionality, but also optimization depending on the device used, and the UI Integration. Also, the use of Code Base and Code Clarity is part of the notation.

Voodoo

🎲**Feature 3 - Debug Menu**

- Implement a Debug Menu that is accessible via the Main Menu
- Within this Debug Menu, it should be possible to individually enable/disable the 2 features that you have implemented previously.
- When every feature is disabled, the game should be in its original state.

Approximate Duration: 1 hour
In this exercise, we are trying to assess the clarity and ease of use about this menu.
